

My family and I moved to Thurlaston in 2012, attracted by the balance between the built and natural environment and have enjoyed living here for the last 11 years. I have enjoyed participating in many of the village events and am a member of the village cider making group, it's a great opportunity to come together and make something from what would otherwise have gone to waste. I work for a local car manufacturer in the field of autonomy based at the National Automotive Innovation Centre at Warwick University. I have a Doctorate in engineering, not medicine. I have a particular interest in understanding the data behind things and using that to drive an informed decision.

My children attend the local schools in Dunchurch and Rugby. My daughter is disabled so I now look at many things with the consideration and perspective of accessibility. I'm a keen cyclist and enjoy making things and have brought these 2 interests together to adapt a bike so my daughter can ride it.

I hope to apply these skills and talents to support the operation of the Thurlaston Parish Council.
